

Environmental Policy

thyssenkrupp Industrial Solutions (Thailand) Limited is committed to providing excellence in environmental management system sustainably. The environmental policy is hereby as follows;

I. Environmental & climate protection are important corporate objectives

The Company regard environmental and climate protection and the responsible use of resources as important corporate objectives and part of our sustainable corporate strategy. The Company's environmental management system and operational environmental protection are subject to continuous improvement with the aim of minimizing environmental impact, conserving resources and protecting the diversity of our natural habitat in an ecologically, economically and socially sustainable way.

II. We promote environmentally friendly and efficient products and services

When executing our projects or providing our services, selecting suppliers and products in procurement processes and in our executing processes we ensure that all resultant environmental impacts and the use of natural resources are kept to a minimum. We achieve this by setting and implementing our own targets for the environmental related performance of our company and by cooperating closely with our customers and suppliers as well as with public and private institutions.

III. Environmental protection and the conservation of resources is a task for everyone

Our managers and employees make an important contribution to environmental protection and the efficient use of resources. Through regular training programs for our employees at all levels, an exchange of information with our contractual partners and the provision of the necessary resources, we motivate our managers, employees and contractual partners to play an active part in implementing our environmental targets.

IV. We comply with our binding obligations

The Company systematically identifies the environment and relevant aspects of our activities, products and services, in particular in the areas of waste, air, noise, energy, climate, soil, water, nature conservation and biodiversity. In this context they also analyze environment and relevant risks and take measures to avoid problems in operations and processes that could negatively impact our environmental performance. Through regular reviews we ensure compliance with applicable legal regulations and other requirements.

V. We conduct an open dialogue

To create transparency and a common understanding of our environmental issues, we conduct a constructive and ongoing dialogue with our employees, customers, suppliers and other contractual partners, government institutions, nongovernmental organizations, pressure groups and the public.
